## SGAME PRO

Sgame Pro is an aggregator of mobile games. Users can single-play Sgame Pro featured games, or challenge other users through an asynchronous multiplayer mode based on private and public challenges.

Play-time is rewarded on-chain with SGMs, crypto-tokens based on the ERC20 protocol, that can be spent within the app itself for in-app purchases or subscriptions to external services, or converted to fiat currencies (EUR, CHF etc.) using an internal wallet.

The app has been developed using C# with Xamarin.iOS and Xamarin.Android, while a Sgame Pro SDK (communication of games with Web APIs and main app) for Unity and HTML5 games, using Mono C# and plain Javascript respectively.

MERCURIO

Mercurio is an application helping businesses connect with customers.

Users can search local businesses within the area, get notified about deals of the day, chat with an available operator, schedule an appointment and eventually send payments.
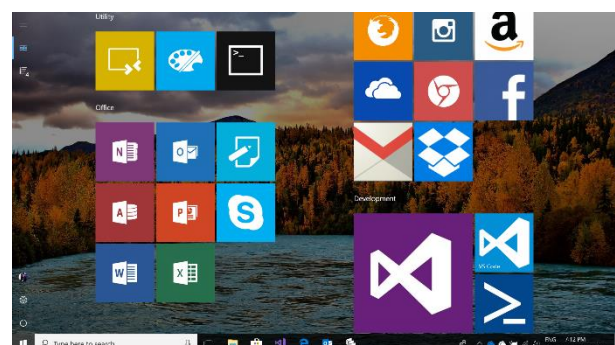

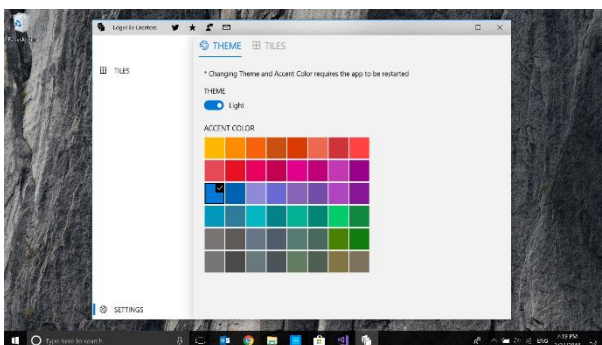

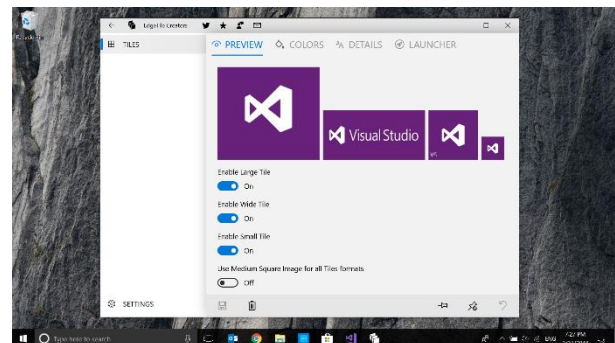

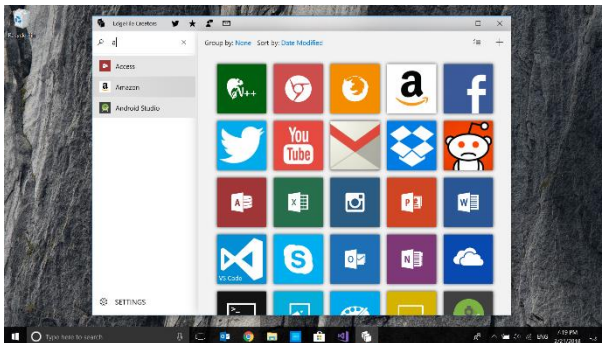

The web frontend has been developed using Angular 6 while the mobile frontend (Android and iOS) using Xamarin. Mercurio's backend consists of an ASP.NET Core Web API application and a set of Azure functions performing secondary tasks.

EdgeTile Creators is the first UWP application enabling full control over Windows 10 Live Tiles. Users can customize, pin and manage Live Tiles for files, folders, apps and websites. The app leverages Desktop Bridge latest capabilities, while the UI has been designed to make the most of the new Fluent Design System.

M Y A P P F R E E

myAppFree allows users to discover new apps and get one for free every day as part of a collaboration with developers and software houses. The app is available on Windows Phone, Windows 10 and Android.

B L O P P Y

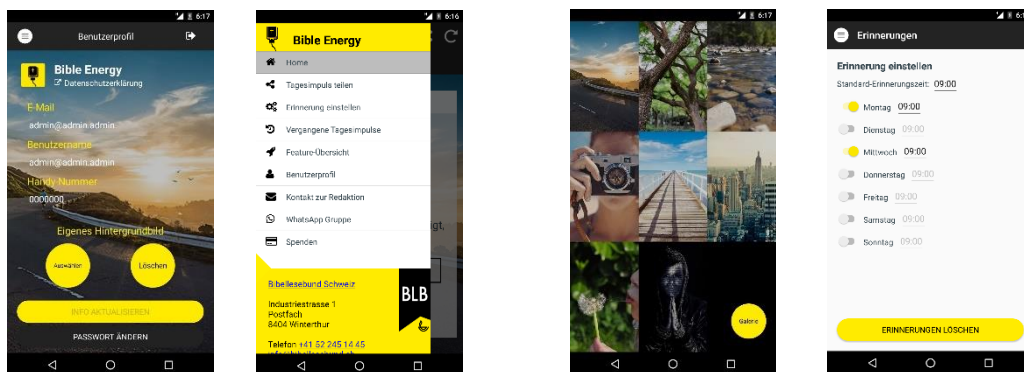

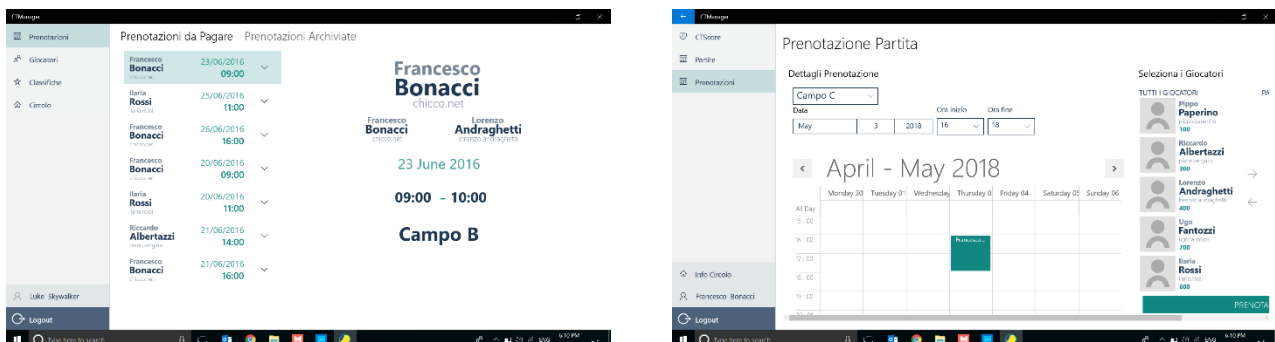

Bloppy is a project by myAppFree for creating native mobile applications starting from WordPress-based websites. Bloppy's UI is tailored to meet the needs of website owners, being highly customizable with settings like colors, fonts and reading layouts. The app has been developed using UWP (Windows 10 Mobile) and Xamarin.Android.

B I B L E E N E R G Y

Bible Energy is the mobile application for the website BibelleSebund. The app allows its subscribers to receive daily news from the website, set up reminders to check for new content and listen to BibelleSebund's podcast. It has been developed using Xamarin.Forms and is available on both Android and iOS.

C T M A N A G E R

CTManager is a Windows 10 UWP app for managing a fictional tennis club. It enables members to reserve courts and organize tournaments. Managers can also check court availability and player rankings.
